

Amendments to the Claims

Please amend the listing of claims as follows:

1. (Original) Wiper device, in particular for a motor vehicle, which includes a wiper arm (10a – 10j) with at least one elastic section, which features a wiper rod (12a – 12j) and a fastening part (14a – 14j) connected especially in a non-articulated manner with the wiper rod (12a – 12j), characterized by at least one spoiler element (16a – 16j) to generate a flow-induced bearing force.
2. (Original) Wiper device according to Claim 1, characterized in that the spoiler element (16a – 16i) is designed at least partially as a single piece with the wiper arm (10a – 10i).
3. (Currently Amended) Wiper device according to Claim 1 ~~or 2~~, characterized in that the spoiler element (16e – 16j) is formed by at least one component separate from a wiper rod component (24e – 24i) of the wiper rod (12e – 12j).
4. (Original) Wiper device according to Claim 3, characterized in that at least one wiper rod component (24e – 24i) of the wiper rod (12e – 12j) is arranged at least partially in a receptacle area of the spoiler element (16e – 16j).
5. (Currently Amended) Wiper device according to Claim 3 ~~or 4~~, characterized in that the spoiler element (16e – 16i) is fastened via at least one locking connection (18e – 18i).
6. (Currently Amended) Wiper device according to ~~one of the preceding claims~~ Claim 1, characterized in that the spoiler element (16j) is designed to be flexible in at least one area.
7. (Currently Amended) Wiper device according to ~~one of the preceding claims~~ Claim 1, characterized in that the spoiler element (16a – 16i) is designed to be at least largely deflection resistant in at least one area.

8. (Currently Amended) Wiper device according to Claim 3 ~~and Claim 7~~, characterized in that the spoiler element (16e – 16i) is recessed in at least one bending area of at least one wiper rod component (24e – 24i) of the wiper rod (12e – 12i) in order to make a stroke movement possible.
9. (Original) Wiper device according to Claim 8, characterized in that the spoiler element (16i) is recessed on an underside of the wiper rod component (24i) of the wiper rod (12i) in the bending area and is designed to be at least partially overlapping on an upper side of the bending area.
10. (Currently Amended) Wiper device according to ~~one of the preceding claims~~ Claim 1, characterized in that the spoiler element (16a – 16d, 16i) features a changing cross-sectional shape in the longitudinal direction.
11. (Currently Amended) Spoiler element for a wiper device, in particular for a motor vehicle, which includes a wiper arm (10a – 10j) with at least one elastic section, which features a wiper rod (12a – 12j) and a fastening part (14a – 14j) connected especially in a non-articulated manner with the wiper rod (12a – 12j), the spoiler element (16a – 16j) being configured to generate a flow-induced bearing force according to one of the preceding claims.
12. (New) Wiper device according to Claim 2, characterized in that the spoiler element (16e – 16j) is formed by at least one component separate from a wiper rod component (24e – 24i) of the wiper rod (12e – 12j).
13. (New) Wiper device according to Claim 4, characterized in that the spoiler element (16e – 16i) is fastened via at least one locking connection (18e – 18i).
14. (New) Wiper device according to Claim 7, characterized in that the spoiler element (16e – 16i) is recessed in at least one bending area of at least one wiper rod component (24e – 24i) of the wiper rod (12e – 12i) in order to make a stroke movement possible.

15. (New) Wiper device according to Claim 14 characterized in that the spoiler element (16i) is recessed on an underside of the wiper rod component (24i) of the wiper rod (12i) in the bending area and is designed to be at least partially overlapping on an upper side of the bending area.
16. (New) Wiper device according to Claim 12, characterized in that at least one wiper rod component (24e – 24i) of the wiper rod (12e – 12j) is arranged at least partially in a receptacle area of the spoiler element (16e – 16j).
17. (New) Wiper device according to Claim 16, characterized in that the spoiler element (16e – 16i) is fastened via at least one locking connection (18e – 18i).
18. (New) Wiper device according to Claim 17, characterized in that the spoiler element (16j) is designed to be flexible in at least one area.
19. (New) Wiper device according to Claim 18, characterized in that the spoiler element (16a – 16i) is designed to be at least largely deflection resistant in at least one area.
20. (New) Wiper device according to Claim 19, characterized in that the spoiler element (16e – 16i) is recessed in at least one bending area of at least one wiper rod component (24e – 24i) of the wiper rod (12e – 12i) in order to make a stroke movement possible.
21. (New) Wiper device according to Claim 20, characterized in that the spoiler element (16i) is recessed on an underside of the wiper rod component (24i) of the wiper rod (12i) in the bending area and is designed to be at least partially overlapping on an upper side of the bending area.
22. (New) Wiper device according to Claim 21, characterized in that the spoiler element (16a – 16d, 16i) features a changing cross-sectional shape in the longitudinal direction.
